***Project Progress Update: Bogoin Project,  
Central African Republic***

Pan African Resources PLC (AIM:PAF), the African based gold exploration company, announces the completion of the third phase of regional geochemical sampling and an increase in the total strike-length of the original soil geochemical anomaly from 7km to 12km in the Bogoin Project ("the Project"), Central African Republic (CAR).

The project is covered by an exclusive exploration license and is a joint venture between Pan African (45% contributory stake), International Mining Investments (IMI, 45% contributory stake) and Goldiam SARL (10% free carry).

"We are currently focusing our efforts on infill sampling within a 4km zone we feel could be the most prospective. We will also be conducting a ground magnetic survey which, in conjunction with the infill soil sampling, will allow us to identify drilling targets that we plan to test before the year-end" commented Jan Nelson, CEO of Pan African.
